

PATCHES & PRIMERS

Why Use Acrylux Professional-Grade Patches & Primers?

- *Acrylux products are formulated to give maximum ease of application for professionals.*
- *We have formulated our products through years of feedback from thousands of contractors.*
- *Our patches and primers are proven to add years of lifespan to a paint job.*
- *We have proprietary blends that are not manufactured by any other national brands.*

Knife-Grade Elastomeric Patch

Large cracks, holes, and other noticeable defects in masonry, stucco, and concrete walls can make or break a paint job. With an incredible ability to hold its body and prevent sagging, this product can fix the most predominant imperfections. We recommend applying this waterproof, flexible, low-shrink patch with a putty knife.

Brush-Grade Elastomeric Patch

This premium-quality textured elastomeric patch is recommended for masonry, stucco, and concrete walls. Masonry Patch Brush Grade is a low-shrink, flexible, waterproof compound perfect for feathering, edging, and filling hairline cracks and small holes. This elastomeric patch can be applied using a standard chip brush for guaranteed long-term results.

FIB Fibered Elastomeric Patch

This elastomeric caulk contains fibers that produce a bridging effect to strengthen roof and wall repairs. In addition to the waterproofing barrier that Fib creates, its chemistry allows it to remain flexible enough to withstand the natural movements of building structures. Fib leaves a semi-smooth, orange peel finish when used on masonry walls.

3 to 1 Surface Conditioner (AC-64)

3 to 1 Surface Conditioner is one of the most unique products on the market! This concentrated bonding coat is diluted with 3 gallons of water, and produces up to 1000 square feet of working product per gallon. Regardless of how much a surface is pressure-cleaned, it is difficult to entirely remove chalk, peeling or chipping paint, dirt, mold, and mildew. 3 to 1 Sealer locks in these problematic conditions, providing an exterior paint a secure surface to bond to.

UL200 Pigmented Primer

When a pigmented primer is needed, UL200 can be custom-tinted to any color, creating an excellent initial coat for slightly chalky surfaces, masonry, stucco, previously painted wood, and countless other substrates. UL200 enables the full coverage capabilities and surface adhesion of our exterior paints and is also useful as a hot primer on fresh stucco.

Flex-50 Caulk

Flex-50 Caulk is one of the most impressive caulking products available in the industry. With an ability to jump gaps, Flex-50 makes one of the most tedious skills nearly effortless. This versatile elastomeric sealant has various interior and exterior uses and is compatible with roof coatings.
